

1 Business Problem Statement

Digital payment platforms like **PhonePe** process millions of transactions daily across services such as insurance, loans, money transfers, and bill payments.

Without proper data analysis and monitoring systems, it becomes difficult to:

- Track transaction performance across different services
- Identify high-revenue business segments
- Detect failed payment patterns and operational issues
- Monitor monthly transaction trends
- Improve customer experience and payment reliability

This project aims to answer the following key business questions:

1. What is the total transaction volume across PhonePe services?
2. Which services contribute the most to overall revenue?
3. What are the common causes of failed payments?
4. How do transaction amounts vary across months and services?
5. How can transaction insights improve operational efficiency and business performance?

The solution is an interactive **Power BI dashboard** that enables stakeholders to dynamically explore transaction data, monitor KPIs, analyze service performance, and make data-driven business decisions.
